Victor Hernandez Guzman

Principal Software Engineer @ DocuSign
Redmond, Washington, United States

Summary

Seasoned Software Architect/Technical Lead with over 20 years of engineering experience, including 14+ years specializing in Identity and Access Management (IAM). Proven track record of designing and implementing high-scale identity providers and integrating them across global platforms and service providers.

Expert in architecting distributed, service-oriented, and microservice systems for hyperscale environments, with deep technical expertise in OAuth, SAML, SCIM, and OpenID.

Distinguished for leading high-stakes architectural initiatives, such as consolidating global identity silos and pioneering industry-first passwordless authentication solutions.

A bilingual technical leader dedicated to establishing engineering excellence, mentoring senior talent, and driving long-term technical strategy for mission-critical security infrastructure.

Experience

DocuSign

Principal Software Engineer

December 2024 - Present (1 year 3 months)

Seattle, Washington, United States

- Architectural Strategy: Serve as a technical leader across the Identity organization, defining the long-term architectural roadmap for core authentication and authorization systems.

- Security Modernization: Orchestrated large-scale initiatives to strengthen global security posture through platform modernization and complex migration projects.

- Identity Evolution: Led the architectural transition to passwordless authentication, balancing high-security compliance requirements with frictionless user experience.
- Technical Governance: Acted as the primary Architecture Owner, mentoring senior engineers and establishing cross-functional design standards to ensure system scalability and integrity.
- Served as a technical leader across the Identity organization, collaborating with multiple teams to drive design and architecture decisions for core authentication and authorization systems.
- Oversaw large-scale initiatives to strengthen security posture, including migration projects and platform modernization.

Microsoft

Principal Software Engineer

February 2022 - December 2024 (2 years 11 months)

Redmond, Washington, United States

- Hyperscale Infrastructure: Provided technical leadership for the Datacenter Secure Token Server (STS), the foundational (baremetal) identity provider supporting the global Azure ecosystem and even Azure Active Directory.
- System Resiliency: Designed and maintained mission-critical authentication capabilities, ensuring high availability and fault tolerance for bare-metal identity services at a global cloud scale.
- Standardization & Protocols: Partnered with security and platform engineering teams to drive enterprise-wide improvements in identity protocols and service reliability.
- Architectural Influence: Leveraged deep subject matter expertise to guide high-stakes architectural decisions, strengthening the security posture of Azure's core infrastructure.
- Engineering Excellence: Established "secure-by-design" practices and mentored engineering cohorts to raise the bar for technical excellence across the organization.

Salesforce

Lead Software Engineer

May 2019 - February 2022 (2 years 10 months)

Greater Seattle Area

- Identity Consolidation: Spearheaded the architectural design and foundational tiers of a unified global Identity Provider (IdP) aimed at consolidating fragmented identity systems across the enterprise.
- Distributed Data Synchronization: Led the critical first phase of IdP integration by architecting the synchronization of datastores across multiple acquired platforms, ensuring a single source of truth for user identities.
- Large-Scale Integration: Managed the technical ownership of authz/authn standards (OAuth, SAML, SCIM, and OpenID) supporting the integration of 8 million client applications and 65 million package installations.
- Strategic Leadership: Served as the technical lead for the Core Authentication team, driving the transition from legacy, isolated identity silos to a modern, service-oriented architecture

Microsoft

Senior Software Engineer

September 2009 - May 2019 (9 years 9 months)

Redmond, Washington, United States

- Pioneering Passwordless Architecture: Architected and delivered the industry's first implementation of passwordless authentication utilizing public key credentials (WebAuthn/FIDO).
- Cross-Ecosystem Integration: Led the integration of the Microsoft Account identity system across the Windows Core, extending seamless authentication to Xbox One, HoloLens, Windows Phone, and Windows 8/10.
- Security Product Ownership: Owned critical consumer-facing security features, including the global Microsoft Account login.
- Session-Based Innovation: Engineered and scaled advanced authentication modalities, including QR Code-based session authentication and push-notification-based identity verification.

- Account Integrity Systems: Designed backend logic for identifying and remediating compromised accounts, protecting the identity integrity of millions of global users.

HP

Technical Lead

October 2007 - September 2009 (2 years)

I was the hands-on technical lead of the LabNET Development team. I led a geo-distributed team of software engineers working from Mexico, USA, Ireland, Singapore and India. My contributions include the introduction of test driven development and continuous integration which allowed us to safely refactor unstable pieces of the software. This had a big impact in our bug count and shortened our development time almost by half.

Comisión Federal de Electricidad

Software Engineer/Team Lead

January 2004 - October 2007 (3 years 10 months)

I played many roles during my time at this company including software developer, analyst, software designer and finally as team leader. I led a development team, performed analysis of functional and business requirements, designed the solutions, actively participated on the development and even the deployment .

I had the opportunity to be part of the committee that defined the process that allowed us to get the the CMMi maturity level certification.

I built and owned, an information system that manages most of the operative information concerning energy generation in the power plants in all of Mexico, more than one hundred plants are supported by this system.

Reactive One

Director of Engineering/Co-Founder

January 2003 - January 2007 (4 years 1 month)

I co founded this company together with a group of engineers, graphic designers and marketing professionals. Reactive One was an information technology company focused on providing tailored software solutions to small and medium companies. Our services included development of web applications, web services, web site design and online marketing campaigns.

Microtec

Software Engineer

January 2001 - January 2004 (3 years 1 month)

Responsible of development, test and deployment of web based applications.

Full stack developer working on every tier including database, business logic and user interfaces.

Education

Instituto Tecnológico y de Estudios Superiores de Occidente, A.C.

B.S, Computer Science
